

Project description

Project plan

During the whole year, we want to work with our students about the care for our planet. We have 4 main topics to work on:

- october-november: Garbage
- december-januari: Transport and green parties
- february-march: Energy saving
- april-mai: Water and caring about nature

Every partner tries to work creative with these themes. Students discuss about the teams, but they also really change things at school.

These topics and the timeline are just a main guideline. Every school can choose the themes they want to work on and the periods that are fitting best.

We collect all our ideas in a big compendium for a greener school. To do this, we create a blog that we share with the world.

Goals

We work on the following skills of our students:

- creative thinking
- problemsolving
- motorical skills
- communication
- citizenship
- critical thinking
- social skills
- IT-skills

Twinspace

On the Twinspace we exchange all our materials, pictures, documents and work with the students. The materials on the Twinspace are hidden because of the privacy of the students.

We also want to share our results with the world. For that purpose we create a common blog with all our suggestions to save our climate.

Blogger

We have a blog on which we collect all our ideas, posts, pictures, tips and tricks to share with the world. Every partnerschool can have author rights to post articles on the blog. Just send an email to ingetwinning@gmail.com for access.

People can give reactions to our blogposts. The reactions are moderated to prevent spam messages and inappropriate posts.
